

*The RM 120 Allroad, the latest model of the Roadmaster range, has just been commissioned to produce hot-mix in one of the most beautiful places in the world: Tahiti*

*After a long journey all over the world - more than 16,000 km – the RM 120 Allroad is now installed on the jobsite of BOYER Group at Papeete.*

*BOYER Group is major contractor in Polynesia and well-known about special foundations, building and civil works. The company has just started with the hot-mix asphalt production. They made a strategic decision to invest in high level equipment supplied by Fayat Road Equipment Division (MARINI-ERMONT asphalt plant, SAE emulsion plant, BOMAG finisher and compactors).*

*The RM 120 Allroad meets all customers' requirements. Thanks to its small size, it was easily positioned onto the jobsite, and since the highest point of the plant doesn't exceed 5 m, it is smoothly integrated into the environment.*

*Furthermore, the RM 120 Allroad produces high quality hot-mix asphalt, whereas the energetic consumption is optimized. Thanks to the retroflux drum mixer and the burner with air assistance, the emissions are drastically low.*

*The RM 120 Allroad is also super mobile, thus enables to reduce significantly the transfers costs. Since its all-roader design, the plant is able to get as close as possible to the jobsite, anywhere in the world.*

*Acquiring the RM 120 Allroad, BOYER Group is now fitted with the most performing and efficient hot-mix asphalt plant, at Tahiti.*
